

Mobile app mockups

36 screens for iPhone, Android and tablet, in light and dark. Built from the web prototype's colours, wording and demo data.

What's in this deck

1	Get started	5 screens	pages 3–4
2	Home and vaults	4 screens	page 5
3	Withdraw with proof	6 screens	pages 6–7
4	Emergency access	5 screens	pages 8–9
5	Invest	3 screens	page 10
6	More and settings	6 screens	pages 11–12
7	Android and tablet	4 screens	pages 13–14

8	Dark mode	3 screens	page 15
---	-----------	-----------	---------

Navigation

Five tabs: Home, Vaults, Emergency, Invest and More. Screens opened from a tab hide the tab bar and keep their main actions pinned at the bottom. The Ops console stays on desktop.

Screen sizes

iPhone 390 × 844 · Android 412 × 915 · tablet 1024 × 768. Every flow is drawn at iPhone size; Android and tablet show how it adapts.

How to read the screens

- They show the prototype's real demo account: Alex Morgan, India, an INR wallet.
- The Emergency flow is the one exception. It assumes a nearly empty Health vault so the Tier 2 cascade is visible.
- Text in [BRACKETS] is a placeholder for a policy that still has to be decided.
- The blue V is the current logo, standing in until the new one is chosen.
- The space at the top and bottom of each screen is where the phone draws its own status bar and home indicator.

Not drawn yet

- Creating a vault, and editing its goal or rule.
- The email code and identity check during sign-up.
- A declined withdrawal and its appeal; uploading an emergency receipt.
- Changing a limit; linked accounts; milestones; notifications; help.

Get started

Welcome
Brand intro with the four product pillars. Terms and privacy are linked.

Create account
Name, email and country. The country sets the currency and rules.

Choose a PIN
Four to six digits on an in-app keypad.

First run: account, PIN and optional protections. Returning customers land on the unlock screen.

Built for the App Store and Google Play

- Bottom tabs, sheets, camera and biometrics make this an app, not a wrapped website (Apple 4.2).
- Sign-in is Vaultwise's own email account, so no extra login service is required (Apple 4.8).
- The privacy policy is linked at sign-up and in Settings (Apple 5.1.1).
- Permissions are asked only when needed, with the reason first.
- Every tap target is at least 48 px tall. The status-bar and home-indicator areas are left clear.

Get started

First run: account, PIN and optional protections. Returning customers land on the unlock screen.

Face ID and alerts

Both optional. The phone's own permission prompt appears only on switch-on.

Unlock (returning customer)

App lock on reopening: PIN, or Face ID from the keypad.

Not drawn yet

- Entering the 6-digit email code.
- The identity check (KYC) step.

Home and vaults

The everyday loop: see what's saved, open a vault, add money.

Home
Total saved, three quick actions, the top vaults and the weekly insight.

Vaults
All six vaults with progress, contribution rule and any held amount.

Vault detail
Balance, summary and the proof that releases funds. Actions stay pinned at the bottom.

Add money
A bottom sheet with quick amounts and an in-app keypad.

Withdraw with proof

Money leaves a vault only after a bill is photographed and checked.

1 · Amount

Amount, payee and the customer's limits on one screen.

2 · Before the camera opens

Explains why the camera is needed before the phone asks for permission.

2 · Camera

Frame guides for the bill. Photos opens the system picker.

Proof capture

- The camera permission is requested only after the explainer screen.
- “Choose from photos” uses the system photo picker, so the app never needs photo-library access (Apple 5.1.1(iii), Google Play photo and video permissions policy).

Withdraw with proof

Money leaves a vault only after a bill is photographed and checked.

7 / 16

Emergency access

The fast, guarded path: the Health vault first, then other vaults with the PIN and a short hold.

Emergency
What's available now in each tier, and the guardrails.

Amount and reason
Amount on the keypad, reason from a short list.

Review release
Shows which vaults pay out, and in what order, before confirming.

Scenario for this flow

- The Health vault has ₹19,288 available here, so a ₹60,000 request cascades into Tier 2 and needs the PIN.
- Every other flow shows the prototype's live demo data.

Emergency access

The fast, guarded path: the Health vault first, then other vaults with the PIN and a short hold.

Confirm with PIN

Tier 2 needs the PIN, or Face ID from the keypad.

Released

Tier 1 is paid instantly. Tier 2 counts down its 90-second hold.

Not drawn yet

- Uploading the receipt afterwards and its result.
- A request blocked by a guardrail.

Invest

A separate ledger from the vaults. Core is index investing; Satellite is practice only.

Invest

Investing runs on a separate ledger from your vaults. Vault savings are never exposed to market or trading risk.

Smart Money Concepts lack peer-reviewed evidence of a reliable edge after costs — that's why this sleeve is capped and opt-in.

Satellite sleeve
Practice mode only, with the gates before real money.

Satellite stays in practice mode

- Both stores expect real trading, and anything involving crypto, to come from a licensed entity (Apple 3.2.1(viii) and 3.1.5, Google Play financial services policy).
- Not drawn yet: the risk questionnaire and the Satellite price chart.

Vaultwise · Mobile app mockups · October 2026

10 / 16

More and settings

Everything that isn't a tab, including personal limits and data rights.

More
Profile, plus the sections that don't need a tab.

Activity
The ledger grouped by day. Long descriptions get a full line.

Assistant
Chat grounded in the customer's own vault data.

Not drawn yet

- Linked accounts.
- Milestones.
- Notifications.
- Help and support.

More and settings

Everything that isn't a tab, including personal limits and data rights.

Your limits
Personal limits and the once-a-month raise.

Settings and privacy
Security, data export, privacy policy, sign out and delete account.

Delete account
What is returned, deleted and kept. Text in brackets is placeholder.

Delete account is required

- Both stores require in-app account deletion wherever sign-up exists (Apple 5.1.1(v), Google Play account deletion).
- Google Play also needs a web link for deletion requests.
- Not drawn yet: changing a limit, and the emergency exception request.

Android and tablet

The same screens adapted to Android's bars and back button, and to wide screens.

Android · Home
Material-style bottom bar. Content runs edge to edge.

Android · Vault detail
Back arrow and a left-aligned title.

Android · Confirm with PIN
Fingerprint replaces Face ID.

Android 16 (API 36)

- New Play apps must target it.
- Edge-to-edge is mandatory and back uses the system gesture.
- Layouts must adapt on tablets and foldables (600dp and wider), which is why there's a tablet layout on the next page.

Android and tablet

Tablet and foldable · Home

A navigation rail replaces the bottom bar, and the content splits into two columns.

The same screens adapted to Android's bars and back button, and to wide screens.

Only Home is drawn at this size

- The other screens would follow the same pattern: rail on the left, a list and its detail side by side.

Dark mode

Three screens on the web app's existing dark colour tokens.

Dark - Home
The navy header deepens; cards sit on near-black.

Dark - Vault detail
Same layout and spacing as light mode.

Dark - Review release
Tier colours keep their meaning on dark surfaces.

Follows the phone's setting

- Appearance can also be set in Settings (System, Light or Dark).

Store readiness

Done

Built into the design

- **App-like, not a wrapped website.** Bottom tabs, sheets, camera capture and Face ID or fingerprint (Apple 4.2).
- **Own email sign-in.** No social login, so no extra login service is required (Apple 4.8).
- **Delete account in Settings.** Required by both stores wherever sign-up exists.
- **Privacy policy.** Linked at sign-up and in Settings (Apple 5.1.1).
- **Permissions in context.** The camera is asked for after an explainer; photos come through the system picker.
- **Android 16.** Edge-to-edge layouts, the system back gesture and a tablet layout.
- **Comfortable targets.** Every tap target is at least 48 px tall, and there is a dark theme.

Blockers

What the design can't solve

- **Licensing.** Both stores expect finance apps to be submitted by the licensed company that provides the service (Apple 3.2.1(viii) and 5.1.1(ix), Google Play financial features declaration). This is the main blocker for a public listing.
- **Backend and login.** App Review needs a working hosted backend and a demo login (Apple 2.1). The prototype has neither.
- **Build route.** Wrapping the existing web app or rebuilding natively is still open. These screens work for either.

Open

Still to decide

- **Delete-account policy.** The wording, the retention period and the web link for deletion requests are placeholders.
- **Logo.** The blue V stands in until one of the four finalists is picked.
- **Colours.** Caption grey and button blue are slightly darker than the web app's, so text passes contrast. Decide whether the web app follows.
- **Satellite on mobile.** Shown as practice mode only. It could also be left out of a first store release.

Rules checked on 4 October 2026 against Apple's App Review Guidelines, Google Play's developer policies and Android 16's behaviour changes.
